

CREATING WEALTH FOR HEALTH AND HUMANITY

The Benefits of EUBOLITE™ and LacTonic™

1. Enhance the performance of good bacteria in our GIT.
2. Reduce the harmful bacteria and their metabolites in our GIT.
3. Relieve constipation.
4. Lower total blood cholesterol level.
5. Enhance the body's immune system

Recommended use:

EUBOLITE™ and LacTonic™ can be consumed directly or be diluted with purified water, milk or juices. A small portion of EUBOLITE™ and LacTonic™ can also be added to soup, casseroles, and other food for a delicious meal.

EUBOLITE™
METABOLITES OF LACTOBACILLUS

EUBOLITE™ is a fermented and filtered liquid which contains metabolites produced by lactobacillus plantarum. This specific strain of Lactobacillus is isolated from food sources. Another similar product, LacTonic™, is fermented but unfiltered liquid blended with white grape juice. Both products are pasteurized and contained no alcohol. They have mild yeasty and sour taste. EUBOLITE™ and LacTonic™ are highly recommended for improving Gastrointestinal Tract (GIT) health.

Lactic Acid Bacteria (LAB), especially Lactobacillus, as a probiotic, is known to produce a wide variety of antibacterial metabolites such as organic acids (lactic acids, acetic acids and propionic acids), bacteriocins and antibiotic-like substances. This bacterial antagonism has been recognized for over a century.

Metabolites of Lactobacillus are known to reduce a number of harmful bacteria such as Enterobacteriaceae and Escherichia coli in the GIT. Lactobacillus produces short chain fatty acids and promotes acidic environment in the GIT. It also produces bacteriocins which are inhibitory compounds to pathogens and competes with other pathogens for specific nutrients. This explains how probiotics act to improve the balance of our intestinal microflora.

In recent years, this phenomenon has received special scientific recognition as natural preservatives in the food and beverages industries.

LAB are classified as "food grade" and are Generally Recognized As Safe (GRAS).
